gv2 auto-wall tracx

Innovative Healthcare Solution

Healthcare today is a function of technology. Whether its the initial examination, patient monitoring or diagnosis determination - everything is computer driven. The new, innovative auto-wall tracx takes high-tech device support to a new level. the auto-wall tracx system allows doctors, nurses, and technicians to work on a solid platform that quickly adjusts to meet their ergonomic and application needs.

SIS-USA's auto-wall tracx mounts to the lower wall section in any healthcare facility, or anywhere space is limited or confined. The unit is immediately adjustable for sitting or standing applications with the speed and accuracy of an electric mechanism. The unit can sit under window sills, chair rails and handrails while maintaining full range adjustability. With its independent keyboard range, writing surface and height adjustable extension arm the system can be placed for data input or presenting to the patient.

move from sit-to-stand with ease with the touch of a button

sleek minimal design allows for quick storage by collapsing flush to the wall

laminated with 3mm edge can be customized in shape and size to meet user needs and acts as stable writing platform

adjustment range +/- 26" from final mounting location

mounts low on the wall to allow for maximum clearance of chair rails, windows and other devices

steel housing securely mounts to wall hiding wires and control box

USER FRIENDLY SOLUTION

The auto-wall tracx system is ideal for anyone that needs specialized accessibility, in a wheel chair, or has limited motion.
